has also been found to be an excellent hapten for FISH, yielding sensitive results with extremely low background levels. 6,7 Molecular Probes offers four unlabeled anti-fluorescein/. Ultrafast electron transfer in the complex between fluorescein and a cognate engineered lipocalin protein, a so-called anticalin. Hapten inhibition or "semi-hapten" is the inhibition of a type III hypersensitivity response. In inhibition, free hapten molecules bind with antibodies toward that molecule without causing the immune response, leaving fewer antibodies left to bind to the immunogenic hapten-protein adduct.

BALB/c mice were immunized with a fluorescein isothiocyanate-BSA complex as a hapten-carrier antigen, and hybridoma cells were produce by cell fusion of splenic lymphocytes removed from internal mice bodies and mouse-myeloma cells (Sp2/0-Ag14) in a polyethylene glycol solution.
